Background & Context

Sima Arome — natural extracts manufacturer powering F&B, cosmetics & wellness brands

Sima Arome

The Natural Scent Creator

Indonesian extracts manufacturer for F&B, cosmetics & wellness brands.

THE OPERATION

Sima Arome runs end-to-end extract production: incoming raw materials are stored in the warehouse, cleared by QC, then queued by PPIC for scheduled production. Lot numbers are issued, finished goods are mapped onto a warehouse floor plan, and samples ship to local and export customers.

Across this chain, manual QC, double data entry between systems, and storage decisions made from spreadsheets create slowdowns, rework, and missed batches. Production lives in people's heads — not in software.

KEY CHALLENGES

Fragmented systems

Operators re-enter the same data into multiple tools — slow, error-prone, blame-prone.

Manual QC bottleneck

Colour and powder quality checks rely on trained eyes; throughput stalls when staff aren't available.

Storage by spreadsheet

Drum placement, hazard segregation, and cold-chain (-4 to -20°C) tracked in files, not systems.

Production opacity

PPIC schedules, lot histories, and sample dispatches live across notebooks and chats.

CORE CHALLENGE • SIMA AROME

How can AI and technology innovate Sima Arome's manufacturing process?

Focus Areas

Single challenge — four directions you can take it. Teams are free to pick one or combine.

01 Integrated Operations System

Kill double-input. Connect supplier intake, warehouse, QC, PPIC scheduling, lot tracking, and dispatch into one source of truth — so the same data isn't re-entered three times across notebooks, spreadsheets, and apps.

02 AI for Fruit & Raw-Material QC

Use computer vision to grade incoming fruit and botanical inputs — ripeness, colour, defects, foreign matter. Faster, more consistent, and more auditable than manual eyeballing.

03 AI for Extract & Powder QC

Visual or sensor-based checks on extract powder for colour, consistency, contamination — flagging out-of-spec lots before they get packed and shipped to customers.

04 AI-Assisted Warehousing & Cold-Chain

Smart slotting on the warehouse floor plan, hazard segregation for IBC/IPPC drums, and cold-chain monitoring (−4°C to −20°C) so finished goods don't degrade or get misplaced.

Important Points & Deadlines

Mark these dates — submissions and finals are non-negotiable

REQUIREMENTS

ITS Student

Open to all current ITS students across faculties.

Teams of 1 to 4

Solo participants welcome. Cross-major teams encouraged.

Not part of organising committee

Conflict-of-interest rule. Strictly enforced.

How & What to Submit

Submit via the official submission link (compulsory) — also post on Devpost (optional, for extra visibility).

01	GitHub Repository OPTIONAL	Public link. Include screenshots, installation steps, and usage instructions in the README.
02	Demo Video REQUIRED	Max 3 minutes, uploaded to YouTube or Vimeo. Show the prototype running — not slides.
03	Pitch Deck REQUIRED	PDF or ZIP. Follow the deck outline on the next slide — keep it visual, keep it tight.
04	Live Demo Link REQUIRED	Deployed through BuildPad or prototype URL (Vercel, Netlify, etc.) *It is strongly encouraged to use BuildPad

REMINDERS

Submission link — compulsory · Devpost — optional · One team member submits · English only · 23:59 WIB, 31 May 2026.

Sample Deck Outline

Tell the story of your idea — not just the code

- | | |
|---|---|
| <div>01</div> Problem Statement <p>The specific, relatable pain point or challenge your project addresses.</p> | <div>06</div> Target Audience & Impact <p>Who the end-users are and the measurable impact or scale of the solution.</p> |
| <div>02</div> The Solution <p>A clear, concise introduction of your product and how it directly solves the problem.</p> | <div>07</div> Business Viability <p>How the project can be sustained, scaled, or monetised in the real world.</p> |
| <div>03</div> Value Proposition <p>What makes your solution unique, effective, and better than existing alternatives.</p> | <div>08</div> Future Roadmap <p>What the next logical steps are for the project (e.g. upcoming features, beta testing, or scaling).</p> |
| <div>04</div> Product Demo <p>A placeholder for your live walkthrough, screenshots, or screen recording showing the core user flow and key features.</p> | <div>09</div> The Team <p>A brief introduction to the members behind the project and their core competencies.</p> |
| <div>05</div> Technical Architecture <p>A high-level overview of your tech stack, system design, or any unique technical implementations (e.g. pipelines, integrations, or APIs used).</p> | <div>10</div> Call to Action (CTA) <p>The final slide prompting the audience to take a specific step (e.g. scan a QR code, review GitHub, support the next phase).</p> |

Judging Criteria

How we score — five criteria, total 100%

01

30%

Enterprise Readiness

How production-ready the solution is — audit trails, RBAC, policy enforcement, security, scalability, clean documentation.

TIP

Use **BuildPad** to ensure your solution is enterprise-ready out of the box. Bonus points awarded.

02

20%

Problem-Solution Fit

How well the solution addresses the official problem statement, depth of understanding of the business problem, and clarity of the value proposition.

03

20%

Innovation & Creativity

Originality of approach, novel use of technology, and creative thinking beyond the obvious solution.

04

20%

User Experience & Design

Usability, interface design, and how intuitive the solution is for its intended end users — including admin/operator experiences, not just end-user views.

05

10%

Pitch & Presentation

Clarity and persuasiveness of the pitch deck and demo video — how well the team communicates the problem, solution, and enterprise impact.

Prize Pool

Total: 12 million IDR + up to 10M IDR AWS credits + XTREMAX career fast-track

1ST

PLACE

5,000,000 IDR

Grand prize · XTREMAX interview fast-track

2ND

PLACE

3,000,000 IDR

3RD

PLACE

2,000,000 IDR

SPECIAL · MOST ENTERPRISE-READY SOLUTION

2,000,000 IDR

Final Round

On-site at ITS Surabaya — live pitching, live judging, live awards

VENUE

ITS Surabaya · Gedung Tower 2

DATE

Saturday, 6 June 2026

TIME

10:00 – 16:00 WIB

FORMAT

On-site pitching · Live Q&A · Awards ceremony

FINALIST OBLIGATIONS

Selected on 2 June 2026

- 1 Confirm attendance within 24 hours of finalist announcement — failure to respond may result in disqualification and replacement.
- 2 At least 50% of each team must attend in person.
- 3 Teams may demo live or screen a pre-recorded demo if their stack can't run on venue Wi-Fi.
- 4 1:1 mentoring slots offered on 3–4 June — finalists should sign up and use them.
